

Germi Derm

Germi Derm is a cream classified in EU as Medical Device (class IIa) designed for the treatment of skin disorders such as atopic dermatitis, contact dermatitis and xerosis especially in anatomically sensitive areas (i.e. cheeks, antecubital folds, popliteal cavities, BTE folds, wrists, ankles).

Composition:

- Oryza sativa germinated grain(30%w/w): lenitive/regenerative/filming action
- Inositol: moisturizing/regenerative action
- Hyaluronic acid: humectant/filming action
- d-Panthenol: emollient/restorative action

Mechanism of Action:

The regenerative and emollient action of the ingredients form a synergy that repairs the damaged skin.

Application:

Apply Germi Derm twice daily.

Clinical trials :

The aim of the study was to evaluate the efficacy of two barrier creams (Germi Derm and Marketed preparation) versus control through instrumental analysis in a single-blind clinical trial. 20 healthy volunteers enrolled.

- EVALUATION OF BARRIER EFFECT
- EVALUATION OF SOOTHING EFFICACY

Results:

- The skin damage in the area pre-treated with Germi Derm was significantly lower in comparison with the control area. Germi Derm and Cetaphil® showed comparable skin barrier effects.
- After two days of treatment, Germi Derm was found to reduce significantly the severity of the skin damage. Germi Derm and Marketed preparation showed comparable lenitive properties in restoring the skin barrier function.

Indication: Atopic dermatitis, contact dermatitis and xerosis

USP: Complete natural formula without side effects

Packaging: 25ml/50ml tube

Category: Medical Device class IIa in EU. Cosmetic in India.
