

Nephrogum

Nephrogum is a Medical Food- Chewing Gum that maintains normal phosphate levels.

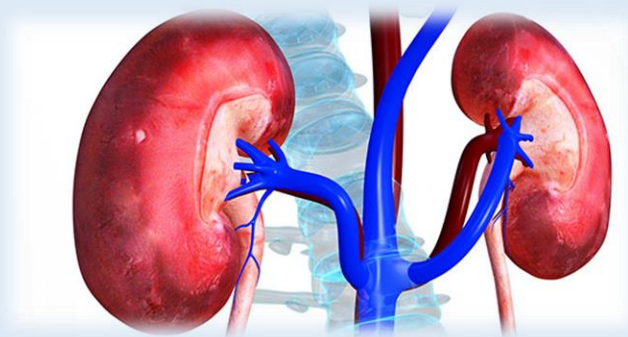

Composition:

Each chewable tablet contains:

Chitosan.....50mg

Mechanism of Action

- Chitosan, the primary ingredient in NephroGum, is a naturally occurring polysaccharide, with a long history as a safe dietary medical and environmental binding agent.
- Chitosan when taken dietary it binds the excess salivary phosphate, hence maintaining the phosphate level.

Clinical trials: Treatment of chitosan chewing gum twice daily (BID) for 2 weeks in 13 hemodialysis patients resulted in a significant reduction of mean serum B which returned to baseline within 2 weeks of discontinuation.

Results:

- Chitosan chewing gum taken BID/ TID reduce the serum P by approximately 0.065 mmol/l.
- Chitosan chewing gum is a safe additional therapeutic option for patients with CKD to reduce dietary P load and Serum P

Dose: Chew one (1) piece of NephroGum for 15 minutes after a meal, not on an empty stomach, and then discard when done.

Indications: Chronic Kidney Disease and End Stage Renal Disease

USP: First ever chewable product to lower phosphate levels

Packaging: Blister/Bottle

Category: Food supplement
